

Python

When using Python, you can manipulate a document's content, including text and paragraph formatting. The API allows you to apply different styles like **bold**, *italics*, and colors. You can also change paragraph formatting, such as alignment and indentation.

Google

Google Docs has a built-in "Page setup" menu to change page size. The default size is 8.5 x 11 inches (Letter size), but you can select from other standard sizes like A4. The Page setup menu is located under the **File** tab on the top menu bar

For more advanced or custom page sizes, you'll need to use a Google Docs add-on, like "Page Sizer." This add-on lets you set custom width, height, and margins for your document, providing more control over the final layout.

Not so good logo

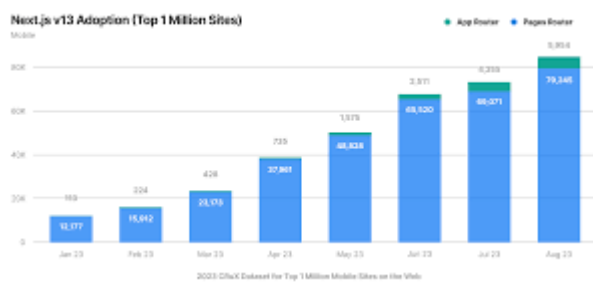

[Next.js](#)

In Next.js, page size and layout are more about optimizing for a web browser rather than a fixed paper size. Next.js includes built-in optimizations like automatic **code-splitting** and **pre-fetching** to ensure that pages load quickly and efficiently.

Growth
